The authors were contacted after publication to request a replacement of Fig. 2M in the manuscript. Unfortunately, the authors inadvertently used an image of the model (Vehicle) group liver histopathology section that matches an image published in Fig. 2D of *Cell Reports* (Volume 26, Issue 1, pages 222–235.e5).

This occurred because two simultaneous experiments evaluated the effects of *F. intestinalis* and *Parabacteroides distasonis* strains on fatty liver improvement in *ob/ob* mice. In one of the repeated experiments, a shared model group was used as the control. However, the representative histopathological images were unintentionally selected from the same mouse. Importantly, this does not affect any conclusions of this article.

The authors kindly request to replace Fig. 2M to ensure the accuracy of the images and maintain the rigor of the study.

New Fig. 2M
